

71586 – 26.9 grams

71537 – 12.3 grams

Ilmenite Basalt

Figure 1: Photo of 71586. Scale is 1 cm. S73 -33424. Note zap pits.

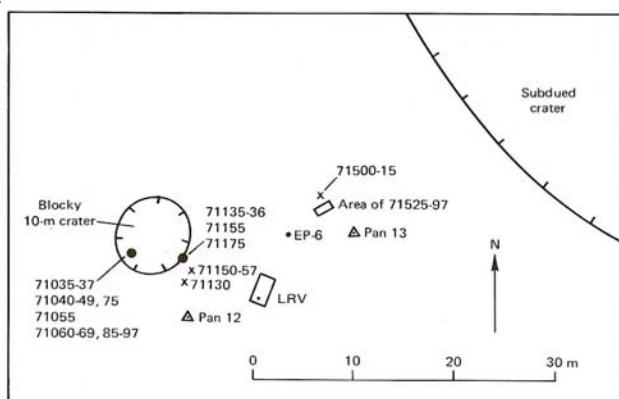

Figure 2: Map of station 1 showing location of rake samples.

Mineralogical Mode

| | 71586 | 71537 |
|-------------|--------------|--------------|
| Olivine | 9.5 | 6.8 |
| Pyroxene | 40.8 | 40.4 |
| Plagioclase | 29.7 | 30.9 |
| Opaques | 14 | 15.2 |
| Silica | 5.1 | 5.7 |
| Meostasis | 0.6 | 0.7 |

Introduction

71525 - 71596 etc. are rake samples collected as part of a comprehensive sample at station 1, taken near Steno Crater, Apollo 17 (figure 2).

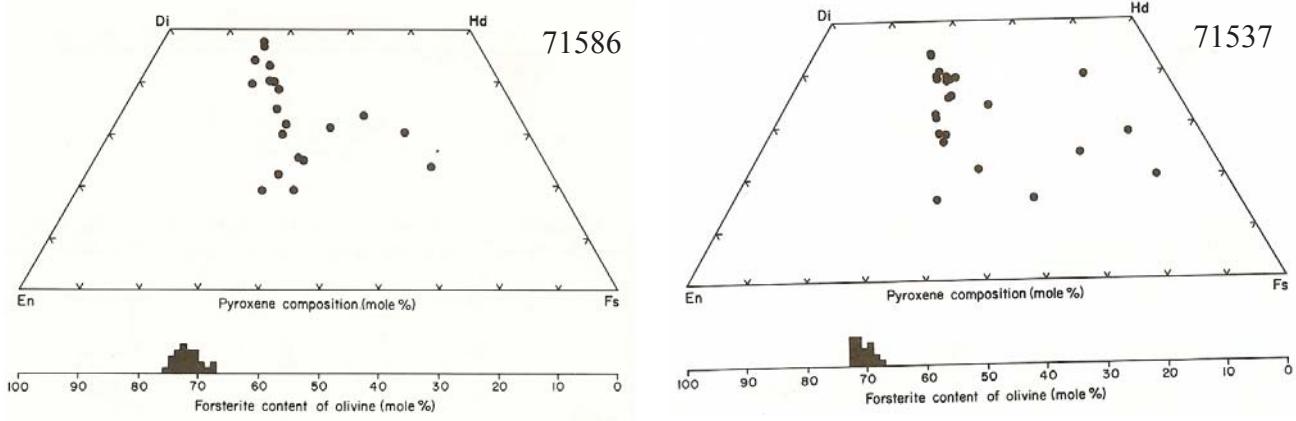

Figure 3: Composition of pyroxene and olivine in 71586 and 71537. Note the Mg.

Petrography

71586 and 71537 are olivine-microporphyritic ilmenite basalts (Warner et al. 1978). They are similar to 71569 and 71596.

71586 has a fine-grained variolitic groundmass with small olivine and acicular ilmenite phenocrysts (figure 6). There are abundant chromite inclusions in olivine.

Chemistry

Murali et al. (1977) give the chemical composition of 30 small Apollo 17 basalts including 71586. It looks like it is a type B basalt (figure 5), although the Ti content is a bit low.

Radiogenic age dating

None

Processing

There is one thin section each for 71586 and 71537.
